## QUALIFICATIONS

- Doctor of Philosophy (Marine Pollution), Université de Bretagne-Sud, France
- Master of Science (Marine Geochemistry), Kolej Universiti Sains & Teknologi Malaysia
- Bachelor of Science (Marine Science), Kolej Universiti Sains & Teknologi Malaysia

## FIELD OF RESEARCH

- Heavy metals Pollution in Sediment and Biota
- Sedimentological Analysis
- Sedimentation Rate Analysis

## RESEARCH INTEREST

My research focus on the heavy metals content in sediment samples which can act as geo-marker for pollution studies. I also studied the sediment characteristic and the relationship between particle size and the heavy metals concentration. Apart from the sediment samples, my research also include on biota samples of fishes, crustaceans, bivalves, mollusks and plants such as seaweed and sea grass. From this biota samples, the suitability of using these organisms as bio-indicator can be identified which best reflect the environmental quality. Risk assessment towards human health by consuming these organisms can be estimated.

Currently, together with the researchers in Ocean Pollution and Ecotoxicology (OPEC) Research Group and other researchers from other universities and organization, we are actively gather all data from Malaysian marine aquatic environment to be stored in GIS database. With this database, these data can easily referred by other researchers for their studies.
